1. INTRODUCTION

Environmental protection is a duty for the Eurobank Group. In 2003, the Bank initiated its environmental protection effort by enacting its official Environmental Policy, which aims at mitigating its environmental impacts.

The Environmental Policy is implemented through the introduction and operation of an Environmental Management System (EMS). Since 2004, Eurobank has been the first bank in Greece, and remains one of the few banks in Europe, to have established an externally certified, ISO 14001 compliant Environmental Management System (EMS). An annual surveillance is performed on the EMS by TUV HELLAS, an independent and accredited Certification Agency.

In 2009, the System moved closer to “maturity” with the completion of procedures for the official listing of Eurobank in the EMAS Register of the Ministry of Environment and Energy (registration number EL-000080) of enterprises that adhere to the EMAS Regulation (EC) 1221/2009 on Environmental Management. As stated in the European Commission’s official documents, this transition facilitates the improvement of environmental performance, and increases the transparency and reliability of environmental management.

Sustainability issues, including those related to the environment, are deemed crucial by the Management of the Eurobank Group, and have been entrusted to the Group Environmental & Sustainability Committee, chaired by the Deputy Chief Executive Officer – Group Chief Operating Officer (COO) & International Activities. The Committee comprises the heads of all the Bank's Units and its Subsidiaries that are involved in the implementation of Sustainability policies, including the Environmental Policy & the Energy Management Policy, so that pertinent decision-making and planning are dealt with at the strategic level.

The Group's environmental activities and the promotion of Sustainability are coordinated by the Group Sustainability/Environmental & Social Affairs Division, with the main purpose of seeing to the implementation of the Environmental Policy and the achievement of the targets emanating from it.

The improvement of the Bank’s environmental performance does not only foster its sustainable growth, but also generates competitive advantages, such as:

- the reduction of operating expenses;
- the exploitation of new business opportunities, such as the development and promotion of “green” banking products.

One of the main principles of the Eurobank group is that international commitment to Sustainable Development can only be achieved through partnerships. To this end, the Group has joined the United Nations Environment Programme Finance Initiative (UNEP FI) since 2005, and works together with the United Nations Environment Programme on the Protection of the Environment and the promotion of Sustainable Development. Represented by its Group Sustainability/Environmental & Social Affairs Division, the Bank has held senior administrative positions at the Global Steering Committee, the Banking Commission, as well as the Chairmanship of the European Task Force of UNEP FI (2010-2014). Through its influential role in the proceedings of this Organization, the Group has actively contributed to the drafting and publication of the first of its kind Sustainable Banking Guide, which is a best practice manual for banks worldwide; the Guide is available at: (www.unepfi.org/fileadmin/documents/guide_banking_statements.pdf)

Moreover, the Bank is a member of the expert panel of the European Commission Energy Efficiency Financial Institutions Group (EFFIG) and the Sustainable Development Committee of the Hellenic Bank Association, and is a sustainability ambassador in the “Sustainable Greece 2020”

initiative, which aims at raising awareness on Sustainable Development and Responsible Entrepreneurship.

The Management of the Eurobank group aims at gradually extending the implementation of the Environmental Policy, as well as disseminating its certified and award-winning environmental practices, to the Group's subsidiaries in Greece and abroad. Moreover, Environment Offices have been operating in the Group's subsidiary banks in Serbia, Bulgaria, and Romania, with the sustained support of the Group Sustainability/Environmental & Social Affairs Division, with the aim of continuously improving the environmental profile of these companies.

The scope of the Bank's Environmental Management System is the "Provision of Banking and Financial Services", the application position is Greece, and the Certification extends to all Central Divisions and branches, which resulted following the operational merger with New TT Hellenic Post Bank that was completed in 2014 (31 buildings and 441 branches of the Eurobank and New TT Branch Network, as shown in Appendix I).

This report, which includes the Bank's performance-related data and results, has been drawn up, validated, and verified following the annual audit by the accordingly accredited Certification Body, as part of the fulfillment of the EMAS requirements, and in order to provide the public and all interested parties with credited environmental information about Eurobank.

The information included in this report refers to the environmental policy, environmental impacts, performance and results of Eurobank concerning the total of the Bank's points of presence, based on the environmental objectives and targets it has set.

Date: 25/07/2017

S. Ioannou
Chairman of the Group Environmental
& Sustainability Committee
Deputy CEO
Group Chief Operating Officer (COO) &
International Activities

D. Chamilaki
Head, Group Sustainability/Environmental &
Social Affairs Division

2. ABOUT EUROBANK

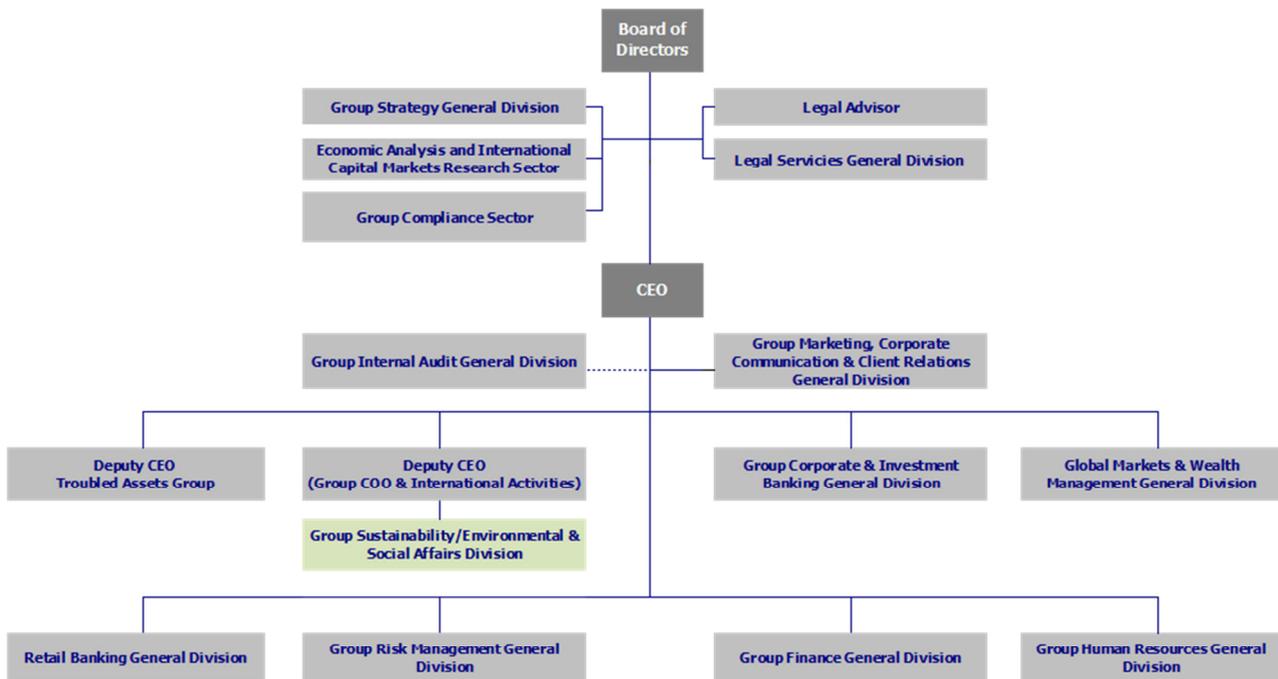

The Eurobank group is a dynamic financial organisation with operations in seven countries, total assets of €66.4 billion, and a workforce of 15,958 people. It launched operations in 1990, and, following a dynamic process of organic growth and mergers it has, in the past few years, been playing a leading role in developments in, and the shaping of, the domestic banking environment.

With an overall network of 896 customer service points in Greece and abroad, the Group offers a comprehensive range of financial products and services to retail and business clients.

In Greece, Eurobank is one of the four pillars of the banking system. With two distinct branch networks, the Eurobank network and the New TT Branch Network, dedicated business centers, a private banking network, and award-winning electronic networks, Eurobank's philosophy is focused on the provision of high quality services to its clients.

The Group also holds a strategic position in Bulgaria, Romania and Serbia, is a key player in the field of wealth management in Cyprus, Luxembourg, and London.

For more detailed information about the Bank and its activities, see the Annual Report 2016, at the Bank's website www.eurobank.gr, while the organization chart is presented in the following graph:

Data as of: 31 December 2016

3. ENVIRONMENTAL POLICY

Eurobank announced its official Environmental Policy in 2003, showing its commitment to reduce the direct environmental impacts from its operation, as well as the indirect impacts from the activities of its clients and suppliers. In its environmental policy, the Bank expresses its intentions, and the principles it is committed to, in regard to environmental issues. The environmental policy has been communicated to the Bank's personnel, and is available to third parties, since it has been posted on its website, www.eurobank.gr

The Bank's senior management has set the following environmental policy:

ENVIRONMENTAL POLICY

Eurobank believes that environmentally responsible action is an essential part of sustainable business growth. As a financial group we are aware of the environmental impact of our activities, and seek the optimum use of natural resources, along with the mitigation of waste production. Moreover, we are aware of the indirect impacts from our financing and investment activities, as well as from the relationships we develop with our customers and the society at large.

We are committed to assess the impact of our activities on the environment, to set appropriate objectives and targets, to continually control and improve our environmental performance, and to adhere to local, national and international laws and regulations.

We believe that environmental management is an integral part of an enterprise's proper and socially responsible behavior. To this end, we adopt an environmentally responsible attitude in our day to day operation, which is also, gradually, adopted towards our shareholders, our customers and suppliers, as well as towards the society at large, implementing sound environmental practices, and promoting economic growth.

Stavros Ioannou
Chairman
Eurobank Group Environmental/
Sustainability Committee

Athens, June 5, 2014

Eurobank sets objectives and targets that are measurable and feasible. These environmental objectives and targets are annually evaluated in terms of effectiveness, and revised if necessary. The results concerning the Bank's environmental performance are included in its Environmental Report, which is available at www.eurobank.gr, and is communicated to the Ministry of Environment and Energy (MINENV), as well as to the EMAS Office of the European Union.

4. ENVIRONMENTAL MANAGEMENT SYSTEM

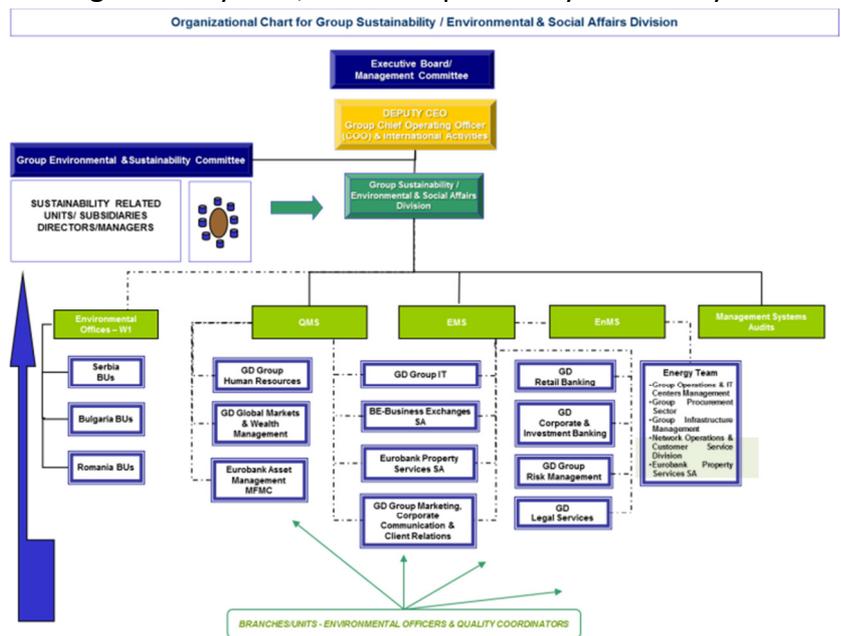

The Environmental Management System (EMS) of Eurobank is an integrated system for the comprehensive and sound management of all environmental issues that arise, or may arise, from the Bank's operation. For a description of the Environmental Management System (EMS) you may refer to the Environmental Report of 2011 (posted at the websites of the Bank and the MINENV)¹.

The EMS implemented by Eurobank is based on the EMAS guidelines, and aims at ensuring compliance with the Environmental Policy within the scope of the Bank's operations. Moreover, it is based on a specific Structure and Organization, as well as on established procedures for monitoring, measuring and recording environmental performance in the immediate, and wider, environment within which the Bank operates.

In this respect, the Management of Eurobank has appointed the Deputy CEO, Group Chief Operating Officer (COO) & International Activities as its representative on environmental issues, in order to ensure the coordinated and responsible promotion and implementation of the Environmental Policy and the EMS in all locations and units of the Bank. The Group Environmental & Sustainability Committee reviews the Environmental Management System, while responsibility for the system's implementation lies with the Group Sustainability/Environmental & Social Affairs Division

while the channels of communication with the Management, as well as with other Departments and Divisions, are depicted in the adjacent Environmental Management Organization Chart.

The Management believes that the successful implementation of the EMS is achieved through the awareness of the basic principles related to the protection of, and respect towards, the environment, which eventually leads to the personal, actual involvement of each employee.

& <http://www.ypeka.gr/Default.aspx?tabid=577&language=el-GR>

5. ENVIRONMENTAL ASPECTS AND IMPACTS

The environmental aspects of the Bank are described in detail in the Environmental Report 2013, which is available at www.eurobank.gr. As of 2015, the management of the “Electricity consumption by lighting, electronic equipment, air conditioning, ventilation and chemical energy” aspect, is carried out through the Energy Management System, certified in accordance with the ISO 50001:2011 standard.

6. ENVIRONMENTAL OBJECTIVES, TARGETS AND PROGRAMMES

Environmental objectives and targets that correspond to the environmental aspects and aim at continually improving the Bank's environmental performance are set each year. In order to achieve these wider objectives, as well as the specific quantitative targets, the Bank designs and implements environmental programmes. The Bank's objectives, targets and implementation programmes for 2016 are modified as follows:

No	Objectives	2017 targets	Implementation Period	Environmental Programmes (EPs)
1	Conservation of Natural Resources	Reduction of electric energy consumption by 6% relative to 2016	31/12/2017	Energy Management System (ISO 50001).
2	Conservation of Natural Resources	Reduction in natural gas consumption by 1% relative to 2016	31/12/2017	Energy Management System (ISO 50001).
3	Conservation of Natural Resources	Reduction in heating oil consumption by 2% relative to 2016	31/12/2017	Energy Management System (ISO 50001).
4	Reduction of gas emissions ¹	Reduction of total Scope 2 greenhouse gas emissions by 31 %, compared to the base year 2014.	31/12/2020	Energy Management System (ISO 50001).
5	Reduction of gas emissions ¹	Reduction of total Scope 1 & 2 greenhouse gas emissions by 30%, compared to the base year 2014.	31/12/2020	Energy Management System (ISO 50001).
6	Conservation of Natural Resources	Paper Supply: 555 tons	12/2017	Paper reduction programme.
7	Waste Minimization	Paper recycling points at all Bank premises	12/2017	Paper & packaging materials recycling programme (use of municipal infrastructure or recycling contractors).
8	Waste Minimization	100% reuse/recycling of toner cartridges	12/2017	Managed Print Services.
9	Waste Minimization	100% recycling of lamp units and batteries	12/2017	Lamp units and batteries recycling programme.
10	Waste Minimization	100% recycling of waste electrical and electronic equipment (excluding lamp units and batteries)	12/2017	Waste Electrical & Electronic Equipment recycling programme.

No	Objectives	2017 targets	Implementation Period	Environmental Programmes (EPs)
11	Raising awareness of environmental issues	To increase environmental employee and public awareness	12/2017	Participation in, or collaboration for organizing voluntary environmental activities.

7. ENVIRONMENTAL PERFORMANCE

The direct and indirect environmental impacts from the Bank's operation are reflected in the disclosure of data concerning environmental performance. This way, Eurobank ensures both transparent operation, as well as the enhancement of the effort to continually improve its "Environmental footprint", as part of a detailed mechanism of material and resources flow analysis and management within the Organization, which includes "green" procurement, materials use and waste disposal. In order to ensure that the Bank's environmental performance is comparable to that of the rest of the financial sector, special indicators have been developed on the basis of internationally accepted standards and Directives.

7.1 Environmental Performance Indicators

The EMS keeps analytical data on the environmental performance of Eurobank. In brief, the environmental performance for 2016 (January 2016-December 2016) is the following:

ENVIRONMENTAL INDEX	ENVIRONMENTAL PERFORMANCE		Y-o-Y (%)
	2015	2016	
Number of employees (persons)	8,674	8,882	2.40%
Total Area (m ²) (buildings and branches)	348,006	343,515	-1.29%
Number of employees trained, to date ¹ (persons)	3,539	3,727	5.31%
Employees trained on environmental issues since the beginning of the EMS's implementation, as a percentage of the total workforce (%)	40.80	41.96	2.84%
Environmental sponsorships (€)	60,000	63,669	-
Water consumption (m ³)	85,200	84,395	-0.94%
Water consumption per employee (m ³ / employee)	9.82	9.50	-3.26%
Electric energy consumption (kWh) ²	59,005,476	54,204,951	-8.14%
Electric energy consumption per area unit (kWh / m ²)	169.55	157.79	-6.94%
Electric energy consumption per employee (kWh / employee)	6,803	6,103	-10.29%

ENVIRONMENTAL INDEX	ENVIRONMENTAL PERFORMANCE		Y-o-Y (%)
	2015	2016	
CO ₂ emissions from electric energy consumption, in tn	40,395.76	37,109.27	-8.14%
CO ₂ emissions from electric energy consumption, in tn per employee (tnCO ₂ /employee)	4.66	4.18	-10.30%
Heating oil consumption (lt)	42,204	40,368	-4.35%
Heating oil consumption per area unit heated by heating oil (lt / m ²)	2.33	2.51	7.73%
Heating oil consumption per employee (lt / employee)	4.87	4.54	-6.78%
CO ₂ emissions from the consumption of heating oil, (tn)	118.2	113.06	-4.35%
Natural gas consumption (kWh)	2,619,113	3,435,925	31.19%
Natural gas consumption per area unit heated by natural gas (kWh/m ²)	50	66	32.00%
Natural gas consumption per employee (kWh / employee)	302	387	28.15%
CO ₂ emissions from the consumption of natural gas, in (tn)	529	694	31.17%
Air travel miles (domestic & international) (mi)	1,952,406	1,716,109	-12.10%
Air travel miles per employee (mi/employee)	225.09	193.21	-14.16%
CO ₂ emissions from domestic & international travel (tn)	290.42	255.27	-12.10%
Total CO ₂ emissions, (tn)	41,333.30	38,194.40	-7.59%
Total greenhouse gas emissions (GHG) in carbon dioxide equivalents (CO ₂ e), (tn)	41,335.57	38,197.13	-7.59%
Total greenhouse gas emissions (GHG) in carbon dioxide equivalents (CO ₂ e), per area unit (tn/m ²)	0.12	0.11	-8.33%
Total greenhouse gas emissions (GHG) in carbon dioxide equivalents (CO ₂ e), per employee (tn/employee)	4.77	4.30	-9.85%
Total Scope 1 greenhouse gas emissions (GHG) in carbon dioxide equivalents (CO ₂ e), , (tn)	649.39	832.59	28.21%
Total Scope 2 greenhouse gas emissions (GHG) in carbon dioxide equivalents (CO ₂ e), (tn)	40,395.76	37,109.27	-8.14%
Total Scope 1 and Scope 2 greenhouse gas emissions (GHG) in carbon dioxide equivalents (CO ₂ e), , (tn)	41,045.14	37,941.86	-7.56%

ENVIRONMENTAL INDEX	ENVIRONMENTAL PERFORMANCE		Y-o-Y (%)
	2015	2016	
Carbon intensity (tnCO ₂ e/€ million in revenues)	27.85	23.31	-16.3%
Paper Supply (kg)	548,939	555,363	1.17%
Paper use per employee (kg/employee)	63.29	62.53	-1.20%
Quantity of recycled paper (kg)	117,879	124,689	5.78%
Toner cartridges supply (units)	823	51	-
Number of toner cartridges recycled/refilled (units)	1,082	1,429 & 1,030 kg	-
Batteries delivered for recycling (kg)	2,767	2,751	-
Recycling of portable batteries (kg)	465	536	-
Lamp units recycled (units and kg)	2,036 & 250.60 Kg	4,458 & 574.1 kg	-
Quantity of power generator lubricants replaced (Kg)	1,400	780	-
Recycling of waste electronic / electrical equipment (Kg) ⁴	132,180	92,890	-
Electronic equipment donated (units) ⁵	1,809	1,267	-
Fuel consumption of gasoline vehicles (lt)	8,238	6,362	- 22.77%
Fuel consumption of diesel vehicles (lt)	2,427	3,170	30.61%
Number of active “green” banking products ⁶	6	6	-
Number of environmental due diligence inspections at projects and/or businesses prior to loan/investment approvals	4	41	-
Number of post-approval environmental due diligence inspections at projects and/or businesses	18	14	-
Percentage of Eco labelled A4 paper supplies	100%	100%	-

¹ – Each year, a scheduled training cycle is offered to Bank employees

² – Electricity providers: PROTERGIA, PPC.

³ – Greenhouse gas emissions are calculated according to the GHG protocol spreadsheets, specifically: Transport tool v2.6, Stationary combustion tool v4.1, Emissions from purchased electricity v4.8 and Global Warming Potential Values AR5.

⁴ – Total non-operative units are forwarded for recycling

⁵ – Operational used equipment is donated

⁶ – Active Green products comprise the following: WWF Visa Card - Customer eStatement - “Green” Home Loans - Investments in photovoltaic systems - Infrastructure projects for generating electricity from RES, natural gas - Participation in environmentally aware enterprises, through Special Purpose Vehicles.

7.2 Environmental Management

The Bank's EMS includes programmes and initiatives divided into six sectors:

1. Personnel Training/ Education and Awareness
2. Conservation of Natural resources (such as paper and electricity) Recycling and waste management
3. Reduction of Greenhouse gas emissions
4. Environmental risk assessment of client financing
5. Development and promotion of “green” banking products

7.2.1 Personnel training, education and awareness

Eurobank actively promotes awareness-raising among employees, encouraging them to be active on environmental issues through, for instance the identification of personnel training needs on Environmental Management. The Bank acknowledges that raising personnel awareness is crucial for the successful implementation of the Environmental Management System.

In order to train its employees on its Environmental Management System, the Bank has been implementing an e-learning programme, which was attended by 188 people in 2016, changing the ratio of environmentally trained employees to 41.96% of the workforce. Among other things, e-learning contributes to reducing trainee commutes, further reducing greenhouse gas emissions.

Moreover, the Bank's Intranet includes a page especially dedicated to the employees' professional development on environmental management issues, while certain individual issues pertaining to the Bank's environmental programmes are regularly communicated to the employees, improving both their awareness and involvement.

7.2.2 Natural resource savings

7.2.2.1 Energy and climate change

Despite the fact that the Bank’s contribution to the greenhouse effect mainly concerns indirect gas emissions (through electric energy consumption), the significance of Climate Change makes the monitoring of energy consumption of all types, and the corresponding emissions, a top priority.

Since 2008, the Bank has been using the internationally accepted Greenhouse Gas Protocol (GHG) (<http://www.ghgprotocol.org/>), for monitoring its Energy-Saving Programme. This Protocol provides a framework for recording and allocating energy consumption, as well as for calculating direct and indirect Greenhouse gas emissions.

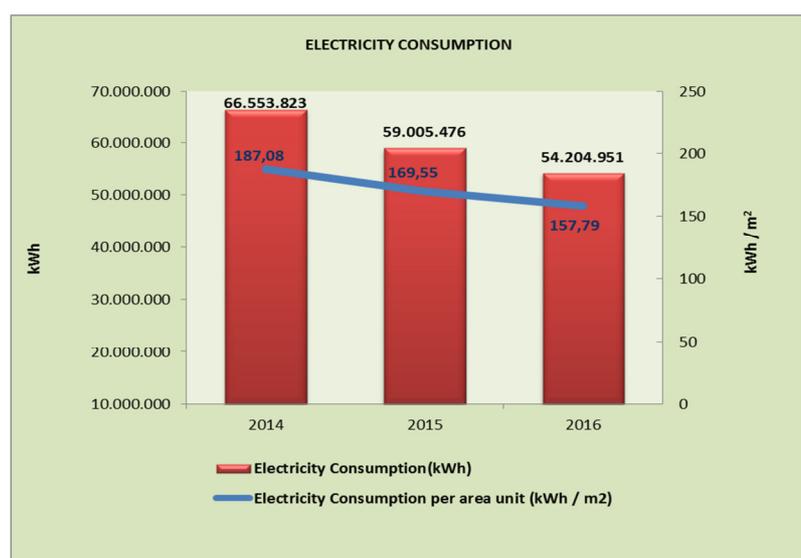

Direct consumption refers to combustion of oil and natural gas for heating purposes, as well as fuel consumption from the diesel and gasoline vehicles used to transport materials between buildings in Attica (3 vehicles). Indirect consumption refers to the use of electric energy for the Organization’s operations. The corresponding greenhouse gas emissions are separated into direct emissions (Scope 1) from oil and natural gas combustion and consumption of diesel and gasoline; indirect emissions (Scope 2) from electric energy consumed by the Bank; and emissions related to employee business travel (Scope 3).

In 2016, the total consumption of heating oil amounted to 40,368 litres, of natural gas to 3,435,925 kWh, of electricity to 54,204,951 kWh, of diesel to 3,170 litres, of gasoline to 6,362 litres, while business air travel totalled to 1,716,109 miles.

The natural gas consumption was greater in 2016 than 2015 (2,619,113 kWh) due to the Bank’s expansion to buildings heated by natural gas (calculations are based on the leased share [%] of the building). The Bank will replace heating oil with natural gas where feasible in 2017.

The total electric energy consumption in 2016 amounted to 54,204,951 kWh, marking an 8.14% reduction from 2015 (59,005,476 kWh). Thus the 10% target set for the year was achieved to a great extent. It should be noted that these figures were affected by the increased heating needs during the winter (See Environmental Report 2015, page 7, 1st target).

The electric Energy consumption per m² was 157.79 kWh/m², which exhibits a 6.94% reduction year-to-year (169.55 kWh/m²). The electric energy consumption per employee was 6,103 kWh/employee, as compared to 6,803 kWh/employee in 2015, reduced by 10.29%.

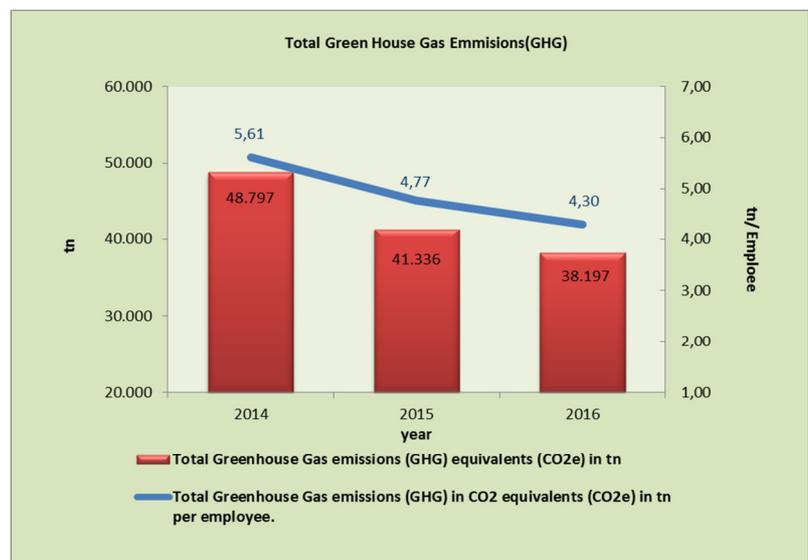

Energy management and the monitoring of the relevant indices aim at taking the appropriate decisions concerning interventions that will minimize the Bank’s share in the Greenhouse effect and Climate Change. As part of the effort to reduce direct greenhouse gas emissions from the combustion of oil for heating purposes, we developed infrastructures for gradually introducing the use of natural gas in Administration buildings, anticipating, at the same time, an improvement in the performance of the relevant heating systems.

Moreover, in 2016, based on the findings of the consumption monitoring project, interventions were made to both the existing equipment and to the design of the new premises’ concerning internal lighting, illuminated signs, air conditioning and electrical installations.

Total CO₂ emissions were reduced by 7.59% year-on-year, and amounted to 38,194 tn, compared to 41,333 tn in 2015.

Similarly, total greenhouse gas (GHG) emissions in carbon dioxide equivalents (CO₂e) amounted to 38,197.13 tn, compared to 41,335.57 in 2015 (reduction by 7.59%).

Total greenhouse gas (GHG) emissions in carbon dioxide equivalents (CO₂e) per area unit amounted to 0.11 tn/m², and was 4.30 tn/employee, reduced by 8.33% and 9.85% respectively from 2015.

In detail, the contribution of greenhouse gases (carbon dioxide, methane, nitrous oxide) in total emissions, as well as the annual gaseous pollutant emissions from the use of oil and natural gas for 2016, were the following:

CO ₂ e breakdown (tn)	2015	2016	Y-o-Y (%)
From CO ₂	41,333.30	38,194.40	-7.59%
From CH ₄	1.77	2.16	21.97%
From N ₂ O	0.50	0.57	14.07%
Total CO₂e	41,335.57	38,197.13	-7.59%
Analysis of atmospheric pollutants (tn)			
SO ₂	0.030	0.028	-5.81%
NO _x	0.450	0.555	23.27%
Particles	0.029	0.033	15.02%

*The measurement of greenhouse gases (in CO₂ equivalents) is based on the GHG protocol spreadsheets, specifically: Transport tool v2.6, Stationary combustion tool v4.1, Emissions from purchased electricity v4.8 and Global Warming Potential Values AR5.

The increase in methane and nitrous oxide emissions was due to a greater use of natural gas for heating Bank premises, which is also reflected in the increase in related pollutants (nitrogen oxides, particulates).

For Eurobank, 2016 was a milestone year in energy management, as the results of implementing the Energy Management System (ISO 50001) became apparent.

As part of this system, the Bank has established, and is implementing, specific Energy Management Policy and procedures, which include the monitoring and analysis of energy consumption, with the aim of implementing technical interventions and administrative solutions wherever necessary, on the basis of scientific methodologies for documenting anticipated improvements in energy efficiency.

This leads to the reduction of energy consumption and, consequently, of greenhouse gas emissions. The methodology implemented by Eurobank with the purpose of diminishing its energy consumption requirements, is based on the “Pay as you save” model, in collaboration with Eurobank Property Services being the Energy Services Company-ESCO, as part of a “Shared Benefit Energy Performance Contract”.

The major interventions made in 2016, in both the existing equipment, and the design of new premises, concerning internal lighting, illuminated signs, air conditioning, electrical installations and natural gas facilities, were the following:

a. Lighting

In 2016, new lighting appliances, featuring energy-saving technology (T5 fluorescent lamps, 4x14W and electronic ballasts) were installed in all the branches and premises that underwent extensive repair-renovation works. The lighting energy savings are estimated at least 25%, compared to the type of lighting appliances that was used till now. As part of adopting new technologies, all halogen lamps in the Bodossakis building light fixtures were replaced with new LED-technology lamps, and the existing light fixtures on the ground floor of Branch 238 in Psychiko were fitted with new LED bulbs.

b. Air conditioning

The branch network and office buildings of the Bank have been fitted with energy-saving air conditioning systems, which can also improve conditions in the corresponding premises, thus improving their ventilation, apart from covering cooling-heating needs. More specifically, the new air conditioning systems installed in 2016 concerned:

- Variable Refrigerant Flow (VRF) Systems, which were combined with air to air exchangers that enable the pre-cooling of external ("fresh") air with low energy consumption.
- Split-type autonomous air-conditioning units, with inverter controls, of high energy class (A or B+), using environment-friendly Freon R410a and showing high coefficients of performance.

The systems were installed at branches: 002 Marousi (replacement of heat pump), 057 Petroupouli, 681 Pyrgos, 063 Kanari (Kolonaki) (existing & extension), 097 Nafplio, 113 Ptolemaida, 126 Tripoli, 183 Neapoli (Thessaloniki), 213 Halkida, 215 Vathi, 226 Karditsa, 362 Santorini (new branch), 381 Glyka Nera (former 652), 611 NTT Kotzia Square (upgraded A/C), 683 NTT Veria, BC Aspropyrgos (1st floor) - new premises, 683 Veria (formerly 077), 668 NTT Tripoli, and the following Bank office spaces:

- 3rd & 4th floor at Filellinon & Xenofontos streets (upgraded/improved A/C in Dealing Room & accounting dept consolidation),
- 2nd floor Building A, 19 Kallirois St.,
- 3rd floor Building D, Nea Ionia (Procurement Division) - Upgraded A/C,
- building at 29 Praxitelous St. (1st, 2nd, 3rd, 4th, 5th, 6th).

c. Improving the performance of electrical installations

In 2016 the Bank carried out an inspection of the indoors electrical installations of its branch network and administration premises, in accordance with the ELOT HD 384 standard.

d. Other energy-saving measures

The following actions took place as part of the Shared Savings Energy Performance Contract with EPS for the Energy Efficiency Optimization of Eurobank's buildings and branches:

- Adjustments to electromechanical installations and operating controls of facilities at the buildings: Moschato, 5 Santaroza St., Bodossakis, 75 Thessalonikis St., 4 Athinas St., Filellinon St. and branches: 208 Nikaia, 009 Peristeri and 043 Nea Kifissia.
- Installation of energy meters at 40 buildings and branches accounting for approximately 59% of the Group's total electricity consumption.
- Specifically with regard to the Nea Ionia building complex, the operation of the E/M equipment that serves the Nea Ionia Data Center was inspected and reconfigured as follows:
 - Installation of an energy monitoring and management system at the rack areas of the Data Center.
 - Design, analysis and evaluation of a system that uses low external air temperatures to assist in the operation of air-conditioning installations during the winter (free cooling) with the aim of ensuring the more effective/efficient use of air-conditioning in the Data Center.
 - Air flow optimization in IT areas (racks).
 - Expansion of existing BMS points; commenced recording and utilization of monitoring data.
 - Retrofitting of the buildings' A/C system centrifugal chiller compressors (1250 KW nominal capacity) and water pumps with inverter-based speed controllers.
 - Retrofitting of the buildings' cooling equipment with temperature compensation systems.

Distinctions for the Eurobank Group at Environmental Awards 2016

The Bank received four distinctions at the Environmental Awards 2016 for its compliance with Sustainable Development and its responsible attitude to the environmental actions. As a result of its primary commitment to properly managing its activities and minimizing environmental impacts, it received the following awards:

- Gold Award for Reduction of Greenhouse Gas Emissions, for its operations and contribution to limiting climate change
- Silver Award in Sustainable Business, for its responsible application of Sustainable Development principles
- Silver Award in Preventive Waste Generation, specifically of paper, through its promotion of eServices
- Silver Award for Energy Saving Investments, at its branches and offices in conjunction with Eurobank Property Services

Eurobank Property Services S.A., a Bank subsidiary, also received a Silver Award for energy management of buildings and company infrastructure.

Planning for 2017

Planned activities for 2017 include the following:

a) Continuation of the following actions in all the Bank's new Branches and office spaces, as well as all areas where extensive refurbishment works are implemented:

- installation of environment-friendly roof-lighting appliances, with T5 light units and electronic ballasts
- installation of LED illuminated signs
- installation of VRF air conditioning systems, and autonomous air-conditioning devices, as well as installation of air-cooled water air-conditioning systems, of energy class A
- installation of a heat recovery ventilation system

b) Preparation of technical inspection reports concerning branches and administration buildings selected from the Bank's annual power consumption data list, in collaboration with Eurobank Properties Services (EPS). The inspection will be performed as part of the Shared Savings Energy Performance Contract with EPS for the Energy Efficiency Optimization of Eurobank's buildings and branches which provide for the following actions at selected Administration buildings and branches throughout 2017:

- detailed recording of the consumption profile of each facility, and creation of respective Consumption Baselines,
- installation of energy meters at 15 buildings and branches, totalling 55 points (including those already monitored as of 2016),
- identification of equipment or functions in need of immediate improvement, implementation of interventions, monitoring of consumption, etc.
- Replacement of fluorescent lighting with new LED lamps in basements and auxiliary spaces at selected buildings.
- Placement of new building energy management systems (BEMS) and upgrades of existing BMS.

7.2.2.2 Paper

The rationalization and control of paper consumption is one of the Bank's major environmental targets. Within this framework, the annual paper supply for 2016 amounted to 555,363 kg, exhibiting an 1% increase over 2015. As a result, the target of 535 tons set for 2016 was not achieved (See Environmental Report 2015, page 7, 4th target). The deviation from the target is largely due to increased portfolio management activities that entailed a greater printing need.

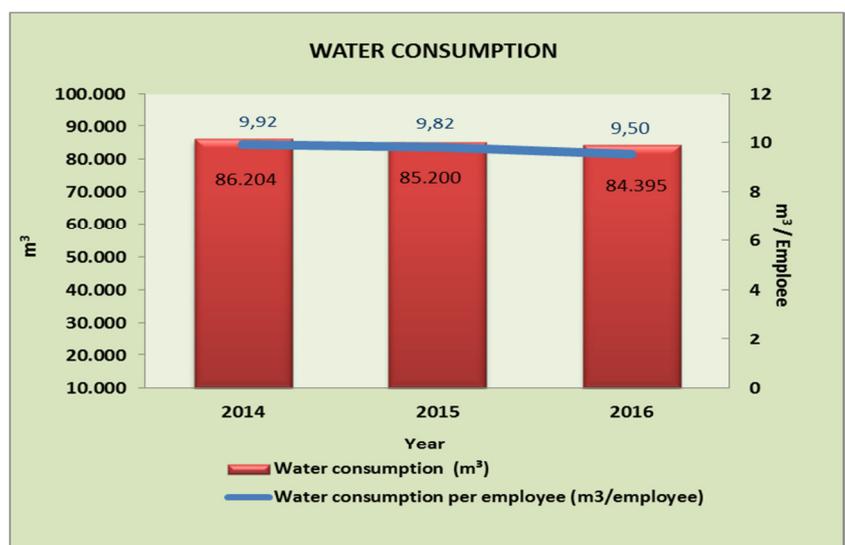

Annual paper supplies per employee decreased by 1%, to 62.53 kg, as compared to 63.29 kg per employee in 2015. In its endeavour to automate customer service at its branches while reducing their environmental footprint, the Bank launched a digital branch in 2016 with plans to gradually expand the idea through the network.

The paper consumption-reducing actions realised by the Bank, which are described in detail in the Environmental Report 2013, are continued till today. It is noted that the Bank A4 papertype use is Ecolabel verified.

7.2.2.3 Water

Water is the most important natural resource, and for this reason the Bank gives great importance to its conservation. Water-conservation measures include the installation of air-cooled air conditioning systems, which consume less water. In 2016, water consumption amounted to 84,395 m³, representing a year on year reduction of 1 %.

In addition, the water consumption per employee indicator was reduced by 3.26%, to 9.50 m³/employee, compared to 9.82 m³/employee in 2015. The Bank has set the target of a rational water consumption reduction, stabilizing it at 9 m³/employee per year.

7.2.3 Recycling and solid waste management

The Bank makes every possible effort to recycle and/or redirect all types of solid waste. All waste, depending on type, is collected in the appropriate bins or at especially designated areas, to be delivered either to the suppliers of the original materials, or to licensed waste management contractors.

Our effort begins with the prudent supply of materials whose waste has limited environmental impacts, such as dry batteries or asbestos-free refurbishing materials.

Today, the Bank is following up on waste streams, in order to ensure their best possible management and the reduction of environmental impacts.

Therefore, the Bank has been monitoring and managing the lifecycle of the following materials within the organization:

1. Toner cartridges
2. Paper and Packaging Materials
3. Waste Electrical & Electronic Equipment
4. Lamps/Batteries
5. Credit Cards

The permanent objective of the Bank is to continue expanding its recycling programmes in order to ensure the safe management of all outgoing recyclable materials.

Toner cartridges

The toner cartridge management programme is described in the 2013 Environmental Report. In 2016, total toner cartridges supply amounted to 55 units, compared to 823 in 2015. This 93.3% reduction is due to the use of the “Managed Print Services” programme throughout the Organization during 2016.

Recycling/refilling applies to 100% of empty toner cartridges, through the relevant management mechanism, thus achieving the target that had been set for 2016 (see Environmental Report 2015, page 7, 6th target). Specifically, 1,429 cartridges were recycled, amounting to 1,030 kg.

The aim remains to ensure the smooth implementation of the MPS programme all over the country, as well as the 100% safe management of empty cartridges.

7.2.3.2 Paper and packaging materials recycling

The paper recycling programme was revised in 2014, the main change being the inclusion of the use of municipal recycling systems along with the choice of contractor for the management of paper and packaging materials.

The total quantity recycled by the recycling contractor during 2016 amounted to 125 tons, and accounted for 22.45% of paper supplies for the year.

The actual recycling quantity is much larger, since there are no measurements of the quantities channelled to municipal recycling systems, which account for more than 70% of the branches; however, the target that had been set for 2016 (see Environmental Report 2015, page 7, 5th

target) has been achieved. Finally, 0.23 tons of packaging materials (plastic, aluminum, paper) were recycled.

7.2.3.3 Electrical & Electronic Equipment

In 2016, the Bank continued its programme for the safe disposal of waste (electrical & electronic) equipment either through reuse (within the Bank's units) and donations to third bodies, or through the recycling of any devices that cannot be reused. Recycling is carried out in cooperation with the official system established by the Ministry of Environment and Energy, and its pertinent licensed associates. Almost 92,890 kg (5,112 units) of equipment were recycled in 2016, accounting for 100% of waste equipment and leading to the achievement of the target that had been set (see Environmental Report 2014, page 7, 8th target). Moreover, the Bank continued its successful electronic equipment donation programme, as part of an effort to manage the life cycle of the materials it purchases. Thus, in 2016 it donated 1,267 electronic equipment items.

7.2.3.4 Lamps/Batteries

Used lamp units and batteries are types of waste that are regulated by the applicable environmental legislation. Their safe disposal prevents the pollution of both the soil and aquifer with heavy metals and other hazardous substances. In 2016, the Bank continued its cooperation with the agencies qualified for managing such materials. Overall, 4,458 units and 574.1 kg of burned-out lamps were delivered for safe disposal.

In addition, batteries weighing a total of 2,751 kg were delivered for safe management, including large/medium UPS batteries. Finally, portable batteries were also collected (through AFIS), leading to the recycling of a total of 536 kg.

The target of recycling the 100% of waste lamp units and batteries was achieved in 2016 (See Environmental Report 2015, page 7, 7th target).

7.2.3.5 Credit Cards

The credit cards that have expired or have been canceled and are returned by our customers constitute non-hazardous materials that we are managing. A programme to collect cards was launched in the last quarter for 2016, with the aim of destroying and recycling them within 2017. The Bank is working closely with recycling companies to put a system in place for this process, with the goal to dispose the 100% of expired or cancelled credit cards turned in by our customers.

7.2.4 Environmental risk assessment

In 2015 the Group carried out a share capital increase, with the dynamic involvement, as in the case of all Greek systemic banks, of major institutional investors, such as the European Bank for Reconstruction and Development (EBRD) and the World Bank through the International Finance Corporation (IFC).

These internationally prestigious institutions have been instrumental, through their established mechanisms and conditions for financing the economy, in highlighting the importance of incorporating environmental and social risk management mechanisms into the banking sector's lending and investment operations.

As an organisation that is constantly improving its in-house know-how on such issues, Eurobank was prepared to upgrade its pertinent mechanisms for identification and management of potential credit, operational and legal risks as well as reputational risks that could derive from the clients' environmental and social behaviour, in order to generate the fewest possible repercussions to the Greek economy, but also through developing conditions to highlight major opportunities for strengthening environmentally and socially responsible entrepreneurship.

In this context, 41 environmental due diligence inspections were performed in 2016 prior to the approval and disbursement of loans. Similar inspections were also performed as part of monitoring the financed projects (14 environmental inspections).

In 2017, the Bank will continue these environmental inspections, actively contributing to environmental protection.

7.2.5. "Green" Procurement Policy

Since the launching of its Environmental Management System, the Bank has stated, through its policy, that it wishes to transmit its environmental culture to its customers and suppliers. In this context, it has been gradually developing environmental criteria for evaluating both its suppliers, and the products and services they offer.

The existence of an environmental policy, as well as Environmental and Energy Management Systems has already been incorporated to the supplier evaluation criteria, while environmental labels (such as Energy Star, FSC, PEFC, Eco-Label etc.), are included in product specifications whenever practically possible. In this context, the following instruments were also updated:

- Environmental specifications of key procured items
Development of the criteria and the corresponding ratings for each type of product, for the evaluation and selection of green products by procurement officers.
- Green procurement evaluation method
Including tables with technical specifications for the evaluation of supplies/suppliers.

In addition, adherence to the environmental legislation is an explicit provision in all contractor agreements.

The Group's Procurement Policy includes special environmental regulations that promote sound environmental conduct among suppliers and ensure, whenever possible, the selection of environment-friendly products.

It should be noted that the Bank's "Green" Procurement Policy is seriously taking into account the peculiarities of the market, and aims at utilizing the Bank's purchasing power in order to positively push the market towards the provision of environment-friendly products and services, without causing disturbances and unfair competition.

7.2.6 "Green" banking products/services

The Bank has developed "green" banking products, which have a positive impact on the environment. Products such as the WWF Eurobank Visa and the "Green" Home Loans are supported by specialized financing programmes.

Moreover, Eurobank Equity Partners, the Group's subsidiary, has developed and has been promoting a major investment product which, among others, supports dynamic companies of the Green Growth sector.

WWF visa

WWF Eurobank Visa is the first “green” product ever issued by a Greek bank, and it is the outcome of the partnership between Eurobank and WWF Hellas, which began in 2000. Up to this date, WWF Hellas has received more than €2.08 million through WWF Eurobank Visa, in order to finance its environmental protection activities.

In 2016, the total number of active WWF Visa cards was 23,712, while Eurobank paid WWF Hellas the amount of €63,669.37, which came from:

- i. the one-off payments for each issuance and renewal of WWF Eurobank Visa cards
- ii. the payment of a percentage on the value of purchases made by cardholders, without any charge to the latter

The amounts paid each year to WWF Hellas enable this organization both to preserve its independence and continue its work unhindered. The amount paid in 2016 was put to the following uses:

Scientific support

Financing of important actions that provide scientific support to WWF's fieldwork, in regard to environmental policy issues, as well as communication (maps that highlight the problem of forest fires, maps recording the existence of lignite stations in Greece, ecological value of the coastal zone).

Oikoskopio

Maintenance and technical support of both the Greek and English versions of this web application, for the enrichment of Oikoskopion with new data, and for the addition of new games to the Oikoskopion kids site.

Dadia Forest National Park Programme

Financing of the study that the Dadia Forest team prepared in order to offer its own assessment and opinion on 5 wind farm environmental impact studies in Thrace, in conjunction with the organisation's proposal for the proper siting of wind farms in the region.

Legal support voluntary team

Support to the policy researcher who, together with a team of 15 volunteers from diverse scientific backgrounds (lawyers, engineers, environmentalists), provides citizens with environmental information and advice in regard to environmental deterioration cases, such as industrial pollution, illegal logging etc.

Management of the Sekania Beach, Zakynthos

Financing, for another year, of part of the actions and campaigns in which the organisation is involved both as a member and as a co-organizer (in collaboration with other NGOs and the National Marine Park of Zakynthos) at the most important nesting beach of the loggerhead sea turtle in the Mediterranean.

“Green” Home Loans

Eurobank has significantly contributed to energy-saving actions, and specifically to the improvement of the energy efficiency of Greek homes, through its active participation in the “Saving at Home” programme.

During the first phase of the “Saving at Home” programme completed by the end of 2015, the Bank provided funding to almost 10,000 households to make their homes more energy efficient.

In 2016, the Bank continued to actively contribute to “Green” home loans through the interim “Saving at Home” programme, through which the Ministry of Environment and Energy provided loans to selected customers who had not been included in the first phase. Eurobank funded more than 1,500 households through this programme.

Meanwhile, the Bank has been actively involved in planning a new “Saving at Home II” programme, which is expected to be announced in 2017, and in improving the procedure for managing applications, in conjunction with the Ministry of Environment and Energy.

Finally, aside from its participation in the State-subsidised programme, Eurobank also offers a similar product, named the “Green Housing - Energy-Saving Loan”, for those who missed the opportunity to be included in the “Saving at Home” programme. This loan is granted with or without underwriting a mortgage, in order to finance any green energy-saving interventions a citizen needs to carry out in an owned property (ranging from the installation of photovoltaic systems for electricity generation at home – net metering – and the complete replacement of heating systems, to the complete refurbishment of homes for energy-saving purposes).

In conclusion, our invaluable experience and expertise in the field of “Green” loans will always provide a springboard for further initiatives, with the ultimate goal of actively contributing to both the achievement of the government's environmental targets and the protection of the overall environment, through the design of “green” banking products that offer the most beneficial financing solutions, covering all the citizens' possible “green” home improvement requirements.

Financing of infrastructure projects for electricity generation from RES and/or other environment-friendly energy sources

In the past few years, the Bank has shown an unwavering commitment in supporting investments in the field of renewable energy sources (RES), which is part of the greater goal of financing the economy and supporting the country's growth.

The Bank has created special lending products for financing RES investments undertaken by small and medium-sized enterprises, such as photovoltaic installations in business premises or rooftops, and photovoltaic power stations and wind farms with installed capacities of up to 5 and 15MW respectively, also supporting large RES investments through more complex banking products, which cover the needs of large enterprises, emphasizing on structured Project Finance.

The Bank is also engaged in financing other environment friendly investments, by financing projects for the generation of electricity from natural gas, which aim at replacing older polluting stations.

The Bank's target for 2017 is to expand its RES project lending portfolio and continue supporting Greek and foreign investors involved in this field.

e-Statement service

The increase in the usage of the e-Statements service during 2016 was, once again, rather impressive, as 23% more e-Banking users chose to receive only electronic account statements. In total, 250.000 customers have discontinued the receipt of more than 678,000 physical statements over the conventional mail.

The most important action that led to the discontinuation of the physical statements were the targeted e-Banking “splash screen” that appeared in front of all e-Banking users who had never discontinued at least one physical statement.

Moreover, the savings for the Bank from the discontinuation of statement deliveries through conventional mail are also substantial and amount to more than €5 million since the service became available.

Participation in environmentally aware enterprises, through Special Purpose Vehicles

The Bank is selectively participating, primarily with minority stakes, in companies with specific characteristics and strong growth prospects, emphasizing on extroversion and environmental awareness, and using, whenever necessary, co-investor funds. Apart, though, from financing capital, it also offers a wide range of advisory services and knowhow in regard to the development and growth of promising enterprises in Greece and abroad. In this context, the Bank has made the following investments:

MESOGEOS SA.:

The Bank has participated in the share capital of MESOGEOS since 2010, along with a private investor, through SINDA Ltd.

The MESOGEOS group of companies is one of the largest groups in the field of environmental protection in Greece. It operates in the water and solid waste treatment markets, as well as in the sector of energy generation from RES and energy conservation. Based in Athens, MESOGEOS maintains offices in Thessaloniki, Cyprus and Romania. It is a leader in the Greek market and has an active presence in other countries such as Cyprus, Romania, Azerbaijan, Albania, Croatia and Montenegro.

The group's operations cover the following sectors:

- Solid & liquid waste
- Water resources
- Polluted soil restoration
- Urban environment upgrade
- Renewable Energy Sources (RES)

Despite the adverse overall financial environment, the Group maintains a satisfactory backlog portfolio and continues to secure major projects, continuously participating in tenders in Greece and abroad. The Group has succeeded in reducing its lending, as well as its cost and general expenditures, while it restructured its operations in 2016 and sold off subsidiaries with similar activities.

IBG HELLENIC FUND III

The Bank participates in the IBG HF III private equity fund which specializes in renewable energy sources, and particularly in installing and operating small to medium-sized photovoltaic installations and wind farms in Greece. Eurobank is the third-largest shareholder in the fund.

The fund was established in 2009 in Athens by the IBG Group as a venture capital fund, under Greek Law 2992/2002. It manages capital amounting to €40.6 million and is administered by Hellenic Capital Partners (HCP) Venture Capital Management S.A., which is overseen by the Hellenic Capital Market Commission.

The fund's portfolio includes wind farms and photovoltaic power stations with a total power of 301 MW in various stages of operation and development. The fund's share is 240 MW and the rest belongs to co-investors. The wind farms generate 94% of the total power, and the photovoltaic power stations the 6%.

7.3 Corporate Social Responsibility and the Environment

The Group, aside from its business activity, has developed social responsibility initiatives in response to the needs of the communities in which it operates. These initiatives include actions to support education, society, culture, innovation and young entrepreneurs, in cooperation with recognised agencies and organizations. The Group is also actively involved in issues related to environmental protection at both national and international level.

8. EMAS VERIFIER CERTIFICATE IN REGARD TO VERIFICATION AND CERTIFICATION ACTIVITIES

TÜV HELLAS (TÜV NORD) SA, certified by the Hellenic Accreditation System with EMAS Verifier No. **EL-V-0004** and accredited for the scope of applications **1.61, 7 (except 7.21), 8.1, 8.91, 10, 11, 12, 13, 14.1, 14.3, 16, 18.1, 19, 20, 21, 22, 23, 24 (except 24.46), 25, 26.2, 26.8, 27, 28 (except 28.29, 28.96 and 28.99), 31, 32.3, 33, 36, 37, 38, 39, 41, 42, 43, 45, 46, 47, 49.42, 49.5, 52, 53, 55, 56, 58, 59.2, 61, 62, 63.1, 64, 65.1, 66.2, 68, 69.1, 70, 71.1, 72, 77.32, 79, 80, 81, 82.3, 84.11, 85, 86.23, 95, 96 (except 96.09)** (NACE code), confirms that the entire organisation referred to in the updated environmental statement of the Eurobank Ergasias Group, registration number (EL-000080), conforms to Regulation (EC) No. 1221/2009 of the European Parliament and the Council of November 25, 2009, on the voluntary participation of organizations in a Community eco-management and audit scheme (EMAS).

By signing this certification I declare that:

- the verification and certification conformed to Regulation (EC) No. 1221/2009;
- the verification and certification confirm that there were no indications of non-compliance with applicable legal requirements concerning the environment;
- the data and information contained in the updated environmental report of the organization provide a valid, reliable and accurate view of the activities performed by the organization, within the scope described in this environmental report.

This document is not equivalent to an EMAS registration. Only a competent agency can, pursuant to Regulation (EC) No. 1221/2009, can provide EMAS registration. This document can only be disclosed in conjunction with other documents.
